|--------------|--|
| 1            | Q 1 Write the linux command to display the calendar with various options.                    |
| 2            | Q 2 Write a linux command to display date with various options.                              |
| 3            | Q 3 Write a linux command to display the list of users who are currently using linux server. |
| 4            | Q 4 Write a linux command to display your system details.                                    |
| 5            | Q 5 Write a linux command to create text file  |
| 6            | Q 6 Write linux command to list all the directories and files on the server.                 |
| 7            | Q 7 Write the linux command to display the content of a file.                                |
| 8            | Q 8 Write the linux command to print the content on standard output device.                  |
| 9            | Q 9 Write the linux command to perform calculations.   |
| 10           | Q 10 Write the linux command to show the current working directory.                          |
| 11           | Qs 11 Write the Linux command to get help with various options.                              |
| 12           | Q 12 Write the linux command to display what all users are currently doing.                  |
| 13           | Q 13 Write the linux command to create a directory.  |
| 14           | Q 14 Write the linux command to change the directory.  |
| 15           | Q 15 Write the linux command to remove a directory.  |
| 16           | Q 16 Write the linux command to delete a file.   |
| 17           | Q 17 Write the linux Command to copy a file to some other location.                          |
| 18           | Q 18 Write the linux command to move a file to some different location.                      |
| 19           | Q 19 Write the linux command to count the number of words, lines and sentences in the file   |

|    |   |
|----|---|
| 20 | Q 20 Write the linux command to give the alias name.  |
| 21 | Q 21 Write the linux command to view the exiting aliases.   |
| 22 | Q 22 Write the linux command to unalias the exiting alias name.   |
| 23 | Q 23 Write the linux command to display the hostname of the system.   |
| 24 | Qs 24 Write the linux command to get information about the operating System.  |
| 25 | Q 25 Write the linux command to view first 5 lines of a file.   |
| 26 | Q 26 Write the linux command to view last 20 lines of a file.   |
| 27 | Q 27 Write the linux command to view last 2 lines of a file.  |
| 28 | Q 28 Write the linux command to check the default permission of a file  |
| 29 | Q 29 Write the linux command to show the use of Basic Regular Expressions using grep Command.   |
| 30 | Q 30 Write the Linux command to display detailed information about processes.   |
| 31 | Q 31. PROGRAM FOR SYSTEM CALLS OF UNIX OPERATING SYSTEMS (OPENDIR, READDIR, CLOSEDIR)   |
| 32 | PROGRAM FOR SYSTEM CALLS OF UNIX OPERATING SYSTEM (fork, getpid, exit)  |
| 33 | Write an appropriate „C“ program which implements the concept of dynamic memory allocation (use of malloc(), calloc(), realloc(), and free() system call. |
| 34 | Write an appropriate „C“ program which implements the concept of fork() system call.  |
| 35 | . Write an appropriate „C“ program which implements the concept of exit() system call   |

## Q 1 Write the linux command to display the calendar with various options.

Command: Calendar

Syntax: cal

Description: This command displays the calendar on the screen. Options:

Cal -3

Description: This command displays three months –previous,current and next

Cal -s

Description: This command displays the month with first day as Sunday

Cal -m

Description: This command displays the month with first day as Monday  
cal year

Description: This command displays calendar of whole year

## Q 2 Write a linux command to display date with various options.

### Syntax: date

Description : This command displays the current date on the screen.

Options:

Date --date="next mon"

Description : This command displays the date on next Monday.

Date --date="1 day ago"

Description: This command displays the previous date of 1 day ago.

Date --date"10 day ago"

Description: This command displays the previous date of 10 days ago.

Date +%y

Description: This command displays the last 2 digits of current year.

Date +%Y

Description: This command displays the current year.

```
$ date
Thu May  6 01:22:28 IST 2021
$ date --date="next mon"
Mon May 10 00:00:00 IST 2021
$ date --date="1 day ago"
Wed May  5 01:23:30 IST 2021
$ date --date="1 day after"
date: invalid date '1 day after'
$ date --date="10 days ago"
Mon Apr 26 01:25:24 IST 2021
```

```
$ date +%y
21
$ date +%Y
2021
$ █
```

### Q 3 Write a linux command to display the list of users who are currently using linux server.

Command: Who

Syntax: who

Description: This command displays the number of users currently working on the server.

Options who -a who -d who -H

who -b

Bash console 20117430

```
Mon May 10 00:00:00 UTC 2021
08:17 ~ $ who
08:18 ~ $ who -a
08:18 ~ $ who -d
08:18 ~ $ who -h
who: invalid option -- 'h'
Try 'who --help' for more information.
08:18 ~ $ who -H
NAME          LINE          TIME          COMMENT
08:18 ~ $ who -b
08:18 ~ $
```

**Q 4 Write a linux command to display your system details.**

**Command: lscpu**

Syntax: lscpu

Description: This command displays details of operating system.

```
$ lscpu
Architecture:      armv7l
Byte Order:        Little Endian
CPU(s):            8
On-line CPU(s) list: 0-7

                   vfpv4 idiva idivt vfpd32 lpae evtstrm aes
                   pmull sha1 sha2 crc32

$ █
```

ESC      CTRL      ALT      —      ↓      ↑

## Q 5 Write a linux command to create text file

Command: touch ,cat Syntax:

touch t2.txt

cat > t3.txt

Description : This command will create text file in linux

```
14:41 ~ $ touch t5.txt
14:41 ~ $ touch t6.txt
14:41 ~ $ touch t7.txt
14:41 ~ $ cat > t8.txt
hello

-rw-rw-r-- 1 ffffok registered_users    0 Feb  1 14:41 t6.txt
-rw-rw-r-- 1 ffffok registered_users    0 Feb  1 14:41 t7.txt
-rw-rw-r-- 1 ffffok registered_users    7 Feb  1 14:42 t8.txt
-rw-rw-r-- 1 ffffok registered_users   13 Feb  1 14:42 t9.txt
14:42 ~ $
```

## Q 6 Write linux command to list all the directories and files on the server.

Command: List

Syntax: ls

Description: This command displays the list of all directories and files in a particular directory.

Options:

ls -l

-l ls -

a

ls-b

Ls-d

Bash console 27180400

[Share wi](#)

```
12:54 ~ $ ls -l
total 12
-rwxr-xr-x 1 fffffk registered_users 232 Feb 1 12:51 README.txt

12:54 ~ $ ls -d
.
12:54 ~ $
```

## Q 7 Write the linux command to display the content of a file.

Command: Cat

Syntax: cat

Description: This command displays the list of all directories and files in a particular directory.

```
12:56 ~ $ ls -l
total 16
-rwxr-xr-x 1 ffffok registered_users 232 Feb 1 12:51 README.txt
-rw-rw-r-- 1 ffffok registered_users 44 Feb 1 12:56 abc.txt
drwxrwxr-x 2 ffffok registered_users 4096 Feb 1 12:53 mca
drwxrwxr-x 2 ffffok registered_users 4096 Feb 1 12:54 mca1
-rw-rw-r-- 1 ffffok registered_users 0 Feb 1 12:53 t1
-rw-rw-r-- 1 ffffok registered_users 0 Feb 1 12:54 t2
12:56 ~ $ cat abc.txt
hello world how are you
what are you doing
12:56 ~ $
```

**Q 8 Write the linux command to print the content on standard output device.**

Command: Echo

Syntax: echo

Description: This command prints the content on standard output device.

Bash console 27180400

```
12:57 ~ $ echo "hy what are you doing i am mca student"
hy what are you doing i am mca student
12:58 ~ $
```

## Q 9 Write the linux command to perform calculations.

Command: Basic Calculator

Syntax: bc

Description: This command performs the basic calculations.

Options:

bc-i bc-h

bc-l bc-v

bc-s

Bash console 20117430

```
08:29 ~/bca $  
08:29 ~/bca $ bc  
bc 1.06.95

bc -s  
0
```

**Q 10 Write the linux command to show the current working directory.**

Command: Working Directory

Syntax: pwd

Description: This command displays the current working directory .

---

Bash console 27180400

```
13:00 ~/mca $ pwd
/home/ffffok/mca
13:00 ~/mca $
```

## Qs 11 Write the Linux command to get help with various options.

### Command:-

- `ls --help` : List help page of `ls` command with their option.
- `Cat --help` : Lists help page of `cat` command with their option.
- `cp --help` : Lists help page of `cp` command with their option.

```
14:02 ~ $ ls --help
Usage: ls [OPTION]... [FILE]...
List information about the FILES (the current directory by default).
Sort entries alphabetically if none of -cftuvSUX nor --sort is specified.

Mandatory arguments to long options are mandatory for short options too.
-a, --all                do not ignore entries starting with .
-A, --almost-all        do not list implied . and ..
--author                 with -l, print the author of each file
--escape                 print C-style escapes for nongraphic characters
-b, --block-size=SIZE    scale sizes by SIZE before printing them; e.g.,
                        '--block-size=M' prints sizes in units of
                        1,048,576 bytes; see SIZE format below
-B, --ignore-backups     do not list implied entries ending with ~
-c                       with -lt: sort by, and show, ctime (time of last
                        modification of file status information);
                        with -l: show ctime and sort by name;
                        otherwise: sort by ctime, newest first
-C                       list entries by columns
--color[=WHEN]           colorize the output; WHEN can be 'always' (default
                        if omitted), 'auto', or 'never'; more info below
-d, --directory          list directories themselves, not their contents
-D, --dired              generate output designed for Emacs' dired mode
-f                       do not sort, enable -aU, disable -ls --color
-F, --classify           append indicator (one of */=>@|) to entries
                        likewise, except do not append '*'
--format=WORD            across -x, commas -m, horizontal -x, long -l,
                        single-column -l, verbose -l, vertical -C
--full-time              like -l --time-style=full-iso
-g                       like -l, but do not list owner
--group-directories-first
                        group directories before files;
                        can be augmented with a --sort option, but any
                        use of --sort=none (-U) disables grouping
-G, --no-group           in a long listing, don't print group names
-h, --human-readable     with -l and/or -s, print human readable sizes
                        (e.g., 1K 234M 2G)
--si                    likewise, but use powers of 1000 not 1024
-H, --dereference-command-line
                        follow symbolic links listed on the command line
--dereference-command-line-symlink-to-dir
                        follow each command line symbolic link
                        that points to a directory
```

```

--hide=PATTERN      that points to a directory
                    do not list implied entries matching shell PATTERN
                    (overridden by -a or -A)
--indicator-style=WORD
                    append indicator with style WORD to entry names:
                    none (default), slash (-p),
                    file-type (--file-type), classify (-F)
-i, --inode          print the index number of each file
-I, --ignore=PATTERN
                    do not list implied entries matching shell PATTERN
-k, --kibibytes      default to 1024-byte blocks for disk usage
-l                 use a long listing format
-L, --dereference    when showing file information for a symbolic
                    link, show information for the file the link
                    references rather than for the link itself
-m                 fill width with a comma separated list of entries
                    like -l, but list numeric user and group IDs
-n, --numeric-uid-gid
                    print raw entry names (don't treat e.g. control
-N, --literal        characters specially)
-o                 like -l, but do not list group information
-p, --indicator-style=slash
                    append / indicator to directories
-q, --hide-control-chars
                    print ? instead of nongraphic characters
--show-control-chars
                    show nongraphic characters as-is (the default,
                    unless program is 'ls' and output is a terminal)
-Q, --quote-name     enclose entry names in double quotes
--quoting-style=WORD
                    use quoting style WORD for entry names:
                    literal, locale, shell, shell-always,
                    shell-escape, shell-escape-always, c, escape
-r, --reverse        reverse order while sorting
-R, --recursive      list subdirectories recursively
-s, --size           print the allocated size of each file, in blocks
-S                 sort by file size, largest first
--sort=WORD          sort by WORD instead of name: none (-U), size (-S),
                    time (-t), version (-v), extension (-X)
--time=WORD          with -l, show time as WORD instead of default
                    modification time: atime or access or use (-u);
                    ctime or status (-c); also use specified time
                    as sort key if --sort=time (newest first)
--time-style=STYLE   with -l, show times using style STYLE:
                    full-iso, long-iso, iso, locale, or +FORMAT;
                    FORMAT is interpreted like in 'date'; if FORMAT
                    is FORMAT1<newline>FORMAT2, then FORMAT1 applies
                    to non-recent files and FORMAT2 to recent files;
                    if STYLE is prefixed with 'posix-', STYLE
                    takes effect only outside the POSIX locale
-t                 sort by modification time, newest first
-T, --tabsize=COLS  assume tab stops at each COLS instead of 8
-u                 with -lt: sort by, and show, access time;
                    with -l: show access time and sort by name;
                    otherwise: sort by access time, newest first
-U                 do not sort; list entries in directory order
-v                 natural sort of (version) numbers within text
-w, --width=COLS    set output width to COLS. 0 means no limit
-x                 list entries by lines instead of by columns
-X                 sort alphabetically by entry extension
-Z, --context        print any security context of each file
-l                 list one file per line. Avoid '\n' with -q or -b
--help             display this help and exit
--version          output version information and exit

```

The SIZE argument is an integer and optional unit (example: 10K is 10\*1024). Units are K,M,G,T,P,E,Z,Y (powers of 1024) or KB,MB,... (powers of 1000).

Using color to distinguish file types is disabled both by default and with --color=never. With --color=auto, ls emits color codes only when standard output is connected to a terminal. The LS\_COLORS environment variable can change the settings. Use the dircolors command to set it.

Exit status:  
0 if OK,  
1 if minor problems (e.g., cannot access subdirectory),  
2 if serious trouble (e.g., cannot access command-line argument).

14:19 ~ \$

```

14:28 ~ $ cat --help
Usage: cat [OPTION]... [FILE]...
Concatenate FILE(s) to standard output.

With no FILE, or when FILE is -, read standard input.

-A, --show-all           equivalent to -vET
-b, --number-nonblank     number nonempty output lines, overrides -n
-e                        equivalent to -vE
-E, --show-ends          display $ at end of each line
-n, --number             number all output lines
-s, --squeeze-blank      suppress repeated empty output lines
-t                        equivalent to -vT
-T, --show-tabs          display TAB characters as ^I
-u                        (ignored)
-v, --show-nonprinting   use ^ and M- notation, except for LFD and TAB
--help                  display this help and exit
--version               output version information and exit

Examples:
cat f - g  Output f's contents, then standard input, then g's contents.
cat        Copy standard input to standard output.

14:28 ~ $

```

```

14:28 ~ $ cp --help
Usage: cp [OPTION]... [-T] SOURCE DEST
or: cp [OPTION]... SOURCE... DIRECTORY
or: cp [OPTION]... -t DIRECTORY SOURCE...
Copy SOURCE to DEST, or multiple SOURCE(s) to DIRECTORY.

Mandatory arguments to long options are mandatory for short options too.
-a, --archive             same as -dR --preserve=all
--attributes-only         don't copy the file data, just the attributes
--backup[=CONTROL]       make a backup of each existing destination file
-b                        like --backup but does not accept an argument
--copy-contents           copy contents of special files when recursive
-d                        same as --no-dereference --preserve=links
-f, --force               if an existing destination file cannot be
                          opened, remove it and try again (this option
                          is ignored when the -n option is also used)
-i, --interactive         prompt before overwrite (overrides a previous -n
                          option)
-H                        follow command-line symbolic links in SOURCE
-l, --link                hard link files instead of copying
-L, --dereference         always follow symbolic links in SOURCE
-n, --no-clobber          do not overwrite an existing file (overrides
                          a previous -i option)
-P, --no-dereference      never follow symbolic links in SOURCE
-p                        same as --preserve=mode,ownership,timestamps
--preserve[=ATTR_LIST]   preserve the specified attributes (default:
                          mode,ownership,timestamps), if possible
                          additional attributes: context, links, xattr,
                          all
--no-preserve=ATTR_LIST  don't preserve the specified attributes
--parents                use full source file name under DIRECTORY
-R, -r, --recursive       copy directories recursively
--reflink[=WHEN]         control clone/Cow copies. See below
--remove-destination      remove each existing destination file before
                          attempting to open it (contrast with --force)
--sparse=WHEN            control creation of sparse files. See below
--strip-trailing-slashes  remove any trailing slashes from each SOURCE
                          argument
-s, --symbolic-link        make symbolic links instead of copying
-S, --suffix=SUFFIX       override the usual backup suffix
-t, --target-directory=DIRECTORY copy all SOURCE arguments into DIRECTORY
-T, --no-target-directory treat DEST as a normal file
-u, --update              copy only when the SOURCE file is newer

```

```

-T, --no-target-directory    treat DEST as a normal file
-u, --update                 copy only when the SOURCE file is newer
                             than the destination file or when the
                             destination file is missing
-v, --verbose                explain what is being done
-x, --one-file-system        stay on this file system
-Z                           set SELinux security context of destination
                             file to default type
    --context[=CTX]          like -Z, or if CTX is specified then set the
                             SELinux or SMACK security context to CTX
    --help                   display this help and exit
    --version                 output version information and exit

```

By default, sparse SOURCE files are detected by a crude heuristic and the corresponding DEST file is made sparse as well. That is the behavior selected by `--sparse=auto`. Specify `--sparse=always` to create a sparse DEST file whenever the SOURCE file contains a long enough sequence of zero bytes. Use `--sparse=never` to inhibit creation of sparse files.

When `--reflink[=always]` is specified, perform a lightweight copy, where the data blocks are copied only when modified. If this is not possible the copy fails, or if `--reflink=auto` is specified, fall back to a standard copy.

The backup suffix is '~', unless set with `--suffix` or `SIMPLE_BACKUP_SUFFIX`. The version control method may be selected via the `--backup` option or through the `VERSION_CONTROL` environment variable. Here are the values:

```

none, off      never make backups (even if --backup is given)
numbered, t    make numbered backups
existing, nil   numbered if numbered backups exist, simple otherwise
simple, never   always make simple backups

```

As a special case, `cp` makes a backup of SOURCE when the `force` and `backup` options are given and SOURCE and DEST are the same name for an existing, regular file.

## Q 20

**Write the linux command to give the alias name.**

Command: alias

Syntax: alias alias\_name="command"

Description : This command gives alias to another commands

Bash console 27180400

```
13:16 ~/mca $ alias folder="mkdir"
13:16 ~/mca $ folder mca3
13:16 ~/mca $ folder mca4
13:16 ~/mca $ ls -l
total 12
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:15 mca2
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:16 mca3
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:16 mca4
13:16 ~/mca $
```

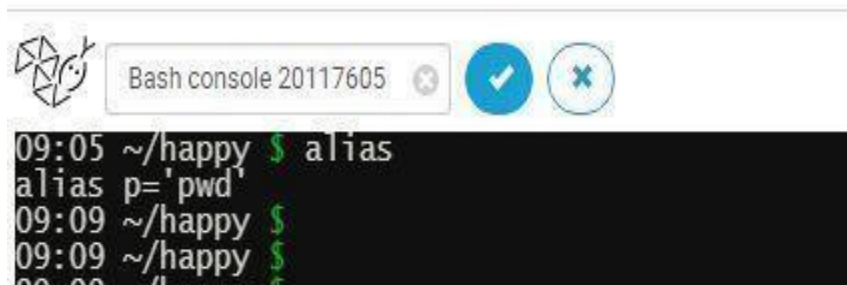

## Q 21

**Write the linux command to view the exiting aliases.**

Command: alias

Syntax: alias

Description : This command displays the existing aliases.

The screenshot shows a terminal window titled "Bash console 20117605". The terminal output is as follows:

```
09:05 ~/happy $ alias
alias p='pwd'
09:09 ~/happy $
09:09 ~/happy $
09:09 ~/happy $
```

## Q 22

**Write the linux command to unalias the exiting alias name.**

Command: unalias

Syntax: unalias command\_name

Description : This command removes the aliases.

Bash console 20117605

```
09:09 ~/happy $ unalias p
09:10 ~/happy $ alias
09:10 ~/happy $
09:10 ~/happy $
09:11 ~/happy $
```

### Q 23

**Write the linux command to display the hostname of the system.**

Command: hostname

Syntax: hostname

Description : This command display the hostname of system.

Bash console 20117605

```
09:11 ~/happy $  
09:11 ~/happy $ hostname  
green-liveconsole7  
09:11 ~/happy $  
09:11 ~/happy $
```

## Qs 24 Write the linux command to get information about the operating System.

**Command:-**uname is used to give you information about your operating system. Uname is the short name for unix name.

- Uname -s : To reveal the kernel name
- Uname -r : Gives you details about kernel release youre using
- Uname -v: Used to fetch the kernel version.
- Uname -n: Parameter -n will give you the node hostname.
- Uname -i: To show you hardware platform.
- Uname -o: What operating system you are running
- Uname -a: One parameter that can reveal all information

```
14:49 ~ $ uname -s
Linux
14:53 ~ $ uname -r
5.4.0-1029-aws
14:53 ~ $ uname -v
#30 SMP Tue Nov 10 18:03:06 UTC 2020
14:53 ~ $ uname -n
green-liveconsole7
14:54 ~ $ uname -i
x86_64
14:54 ~ $ uname -o
uname: invalid option -- 'o'
Try 'uname --help' for more information.
14:54 ~ $ uname -o
GNU/Linux
14:54 ~ $ uname -a
Linux green-liveconsole7 5.4.0-1029-aws #30 SMP Tue Nov 10 18:03:06 UTC 2020 x86_64 x86_64 x86_64 GNU/Linux
14:54 ~ $
```

## Q 25

**Write the linux command to view first 5 lines of a file.**

Command: head

Syntax: head -5 filename

Description : This command display first 5 lines of a file.

---

 Bash console 20116365  
05:32 ~ \$ cat > abc.txt  
hello  
this  
is a  
text file  
created in  
Linux  
so be ready  
to see what  
linux can  
do  
^Z  
[1]+ Stopped cat > abc.txt  
05:33 ~ \$ head -5 abc.txt  
hello  
this  
is a  
text file  
created in  
05:36 ~ \$

## Q 26 Write the linux command to view last 2 lines of a file.

Command: tail

Syntax: tail -2 filename

Description : This command displays last 20 lines of a file.

Bash console 27181609

```
14:44 ~ $ wc -c t6.txt
0 t6.txt
14:44 ~ $ wc -c t9.txt
13 t9.txt
14:44 ~ $ cat > t10.txt
1
2
3
4
5
6
7
8
9
10^Z
[5]+  Stopped                  cat > t10.txt
14:47 ~ $ tail -2 t1-.txt
tail: cannot open 't1-.txt' for reading: No such file or directory
14:47 ~ $ tail -2 t10.txt
8
9
14:47 ~ $
```

**Q 27**

**Write the linux command to view last 20 lines of a file.**

Command: tail

Syntax: tail -20 filename

**Description :** This command displays last 20 lines of a file.

Bash console 20116407

```

[1]+  Stopped                  cat > hello.txt
05:40 ~ $ tail -20 hello.txt

```

## Q 28

**Write the linux command to check the default permission of a file**

Command: `ls -l`

Syntax: `ls -l`

Description : This command checks the default permission of a file

[Bash console 27180400](#)

```
13:22 ~/mca $ ls -l
total 12
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:15 mca2
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:16 mca3
drwxrwxr-x 2 ffffoK registered_users 4096 Feb  1 13:16 mca4
13:22 ~/mca $
```

## Q 29

**Write the linux command to show the use of Basic Regular Expressions using grep Command.**

Command: grep

Syntax: grep "[aA]"

Description : This command searches for specific pattern in a file.

Bash console 20116692

```
cat: a/txt: No such file or directory
06:28 ~/bca $ cat a.txt
jan
feb
mar
apr
06:28 ~/bca $ grep -E 'apr' a.txt
apr
06:29 ~/bca $
```

### Q 30 Write the Linux command to display detailed information about processes.

Command: ps

Syntax: ps [OPTIONS]

**Description:** ps displays information about a selection of active processes. If you want a repetitive update of the selection and displayed information, use top(1) instead.

ps -f: Ps is used for process state. -f command is used to show full list ps -e: ps is used for process state. -e command is used to show process for your own system.

```
Himanginis-MacBook-Pro:~ himanginikhanna$ ps -f
  UID    PID  PPID    C  STIME  TTY          TIME CMD

```

### **31. PROGRAM FOR SYSTEM CALLS OF UNIX OPERATING SYSTEMS (OPENDIR, READDIR, CLOSEDIR) ALGORITHM:**

STEP 1: Start the program.

STEP 2: Create struct dirent.

STEP 3: declare the variable buff and pointer dptr.

STEP 4: Get the directory name.

STEP 5: Open the directory.

STEP 6: Read the contents in directory and print it.

STEP 7: Close the directory.

#### **PROGRAM:**

```
#include<stdio.h>

#include<dirent.h> struct
dirent *dptr; int main(int argc,
char *argv[])
{ char buff[100]; DIR *dirp; printf("\n\n
ENTER DIRECTORY NAME"); scanf("%s",
buff); if((dirp=opendir(buff))==NULL)
{ printf("The given directory does not exist"); exit(1);
}

while(dptr=readdir(dirp))
{ printf("%s\n",dptr-
>d_name);
```

```
}
```

```
closedir(dirp);
```

```
}
```

## **32. PROGRAM FOR SYSTEM CALLS OF UNIX OPERATING SYSTEM (fork, getpid, exit)**

### **ALGORITHM:**

STEP 1: Start the program.

STEP 2: Declare the variables pid, pid1, pid2.

STEP 3: Call fork() system call to create process.

STEP 4: If pid == -1, exit.

STEP 5: If pid != -1, get the process id using getpid().

STEP 6: Print the process id.

STEP 7: Stop the program

### **PROGRAM:**

```
#include<stdio.h>

#include <unistd.h> int
main()
{
    int pid, pid1, pid2;
    pid=fork(); if(pid==
1)
{
    printf("ERROR IN PROCESS CREATION\n");
    exit(1); } if(pid!=0)
{
    pid1=getpid(); printf("\n the parent process ID
is %d\n", pid1);
```

```
    } else { pid2=getpid(); printf("\n the child  
process ID is %d\n", pid2);  
    } return  
    0;  
}
```

**33. Write an appropriate „C“ program which implements the concept of dynamic memory allocation (use of malloc(), calloc(), realloc(), and free() system call.**

```
#include <stdio.h>

#include <stdlib.h>

int main()

{

    int* ptr;

    int n, i;      n

    = 5;

    printf("Enter number of elements: %d\n", n); ptr =

    (int*)calloc(n, sizeof(int)); if (ptr == NULL) {

        printf("Memory not allocated.\n");

        exit(0);

    }

    else {

        printf("Memory successfully allocated using calloc.\n");

        for (i = 0; i < n; ++i) {                ptr[i] = i + 1;

            }

        printf("The elements of the array are:

");        for (i = 0; i < n; ++i) {

            printf("%d, ", ptr[i]);

            }

        n = 10;
```

```

        printf("\n\nEnter the new size of the array: %d\n", n);

ptr = realloc(ptr, n * sizeof(int));

printf("Memory successfully re-allocated using realloc.\n");

for (i = 5; i < n; ++i) {                ptr[i] = i + 1;

    }

printf("The elements of the array are:

");    for (i = 0; i < n; ++i) {

printf("%d, ", ptr[i]);

    }

    free(ptr);

}

return 0;

}

```

Enter number of elements: 5

Memory successfully allocated using calloc.

The elements of the array are: 1, 2, 3, 4, 5,

Enter the new size of the array: 10

Memory successfully re-allocated using realloc.

The elements of the array are: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10,

**34. Write an appropriate „C“ program which implements the concept of**

**fork() system call.** #include <stdio.h> #include <unistd.h> int main() {

int id;

printf("Hello, World!\n");

id = fork(); if (id > 0) {

printf("This is parent section [Process id: %d].\n", getpid());

}

else if (id == 0) {

printf("fork created [Process id: %d].\n", getpid());

printf("fork parent process id: %d.\n", getppid());

}

else {

printf("fork creation failed!!!\n");

} return

0;

}

```
Hello, World!
This is parent section [Process id: 1252].
fork created [Process id: 1253].
fork parent process id: 1252.
```

**35. Write an appropriate „C“ program which implements the concept of exit() system call**

```
#include <stdlib.h>  int
main ()
{
// declaration of the variables  int
i, num;  printf ( " Enter the last
number: ");  scanf ( " %d",
&num);  for ( i = 1; i<num; i++)
{
// use if statement to check the condition  if
( i == 6 )

/* use exit () statement with passing 0 argument to show termination of the program
without any error message. */  exit(0);

else

printf ( " \n Number is %d", i);
}  return
0;
}
```

```
Enter the last number: 10
```

```
Number is 1
```

```
Number is 2
```

```
Number is 3
```

```
Number is 4
```

```
Number is 5
```
